

# Petaluma Municipal Airport

## O69

### Ground Communications Outlet

**121.72**

To contact Oakland Center or FSS Wx Brief by Voice Activation or Quick Click while on the ground to **obtain** or **cancel** an IFR Flight Plan:

- To contact Oakland Center, key the mic and say “Air – Traffic- Control” or click the mic 4 times.
- To contact FSS Wx Brief, key the mic and say “Call – Flight- Service – Station” or click the mic 6 times.

The system will ask you to click the mic twice if it is dialing the correct location. If it is not correct, wait 5 seconds and start again.

The GCO will then dial the appropriate number. You will hear it dialing. When the briefer answers just communicate your needs via the radio-telephone link.

#### HINTS

If there is no voice activity over the system for 60 seconds (told to standby, ect.) it will say “Timing Out”, key the mic within 3 Seconds and that will get an extra 30 seconds of “**no voice time**”.

If the system does not respond at first, try repositioning your aircraft for a clear path to the antenna at the terminal building.

To terminate the call, click the mic 3 to 5 times while the frequency is clear and the call will be terminated. Wait 6 seconds and start again.
